## 1. Staff Contact Details

Position	Name	Email	Availability; times and location
Course Convener	Prof. Andy Baker	<a href="mailto:a.baker@unsw.edu.au">a.baker@unsw.edu.au</a>	G17, room 407. Please send an e-mail to arrange a consultation time
Lecturer	A/Prof Bryce Kelly	<a href="mailto:Bryce.kelly@unsw.edu.au">Bryce.kelly@unsw.edu.au</a>	G17, room 408. Please send an e-mail to arrange a consultation time
Lecturer	Ms Charlotte Iverach	<a href="mailto:Charlotte.iverach@gmail.com">Charlotte.iverach@gmail.com</a>	G17
Lecturer	Ms Katie Coleborn	<a href="mailto:k.coleborn@unsw.edu.au">k.coleborn@unsw.edu.au</a>	G17
Field assistants	Eliza Wells		
	Ingrid Flemons		
	Tbc		
	Tbc		

## 2. Course details

### Credit Points:

6 units

There are no prerequisites for this course.

Note: there is no difference between GEOS3733 and GEOS6733. GEOS3733 is for undergraduate entry and GEOS6733 is for postgraduate entry.

### Summary of the Course

This is a 5-day field course run at Wombeyan Karst Reserve, NSW. Each day, students will be given short lectures on the theory behind various environmental geophysical methods used in the analysis of air, water, soil, vegetation or the subsurface. This will be followed by field measurements, data processing, data analysis and presentation of the results to the class.

Methods covered will include a selection of the following environmental geophysical techniques, depending on instrument availability:

- time-domain reflectometry measurements of soil water content;
- infra-red measurements of soil carbon dioxide concentrations;
- x-ray fluorescence analysis of soil mineral properties;
- optical geophysics and organic water quality;
- cavity-ringdown and off-axis mass spectrometry of gases.

### **Aims of the Course**

This course aims to provide each student with the necessary theory and skills to undertake geophysical measurements of air, water, vegetation, soil and rock. These skills are often required in research and consulting environments in hydrology, hydrogeology, climatology and environment sciences.

Students will gain a theoretical understanding of the electromagnetic, optical, and dynamic properties of air, water, vegetation, soil and rock; practical field experience in measuring the properties of air, water, vegetation soil and rock; data analysis skills; group work experience; public presentation skills; and literature research skills.

### **Student learning outcomes**

At the end of this course, you should know how to apply a range of geophysical methods for a range of environmental applications.

These could include the following:

- Understand the theory and application of using time domain reflectometry (TDR) to measure soil moisture.
- Understand the theory and application of optical spectroscopic measurements to determine river and groundwater quality.
- Understand the theory and application of X-ray fluorescence to analyse soil and rock mineralogical properties
- Understand the theory and application of infra-red measurements of gas carbon dioxide concentration and fluxes
- Understand the theory and application of cavity-ringdown mass spectrometry and its application to gas analyses such as methane and carbon dioxide.

### **Graduate Attributes**

The students will be encouraged to develop the following Graduate Attributes by undertaking the selected activities and knowledge content. These attributes will be assessed within the prescribed assessment tasks.

At the conclusion of this course the student will be able to:

1. Understand the theory behind a wide range of field environmental geophysical techniques
2. Apply these theories to the field application of the techniques
3. Undertake analysis of the field data
4. Create reports and presentations based on the theory and application of the techniques.

### **3. Rationale for the inclusion of content and teaching approach**

This course content enables students to develop specific skills in the theory and application of environmental geophysical techniques. Students will develop report writing and presentation skills.

theoretical, application and communications skills. These skills are often required in research and consulting environments in hydrology, hydrogeology, climatology and environment sciences.

#### 4. Teaching strategies

This course is taught as a 5-day field course, as we believe that the best way to reinforce theory and to make the theories relevant to you, is for you to have hands on experience with each technique. Each technique will be introduced with a lecture, which covers the theory of each methodology, followed by up to a whole day applying the method in the field.

#### 5. Assessment

Assessment task	Length	Weight	Learning outcomes assessed	Graduate attributes assessed	Due date
Field group presentation	15 minutes + questions	20%	Theoretical understanding, field application, data processing	Presentation skills	Held on fieldtrip
Field report	500 words, 2 figures and 1 table maximum per technique	40%	Field application, data processing	Data analysis and report writing	Week 7
Literature review of one technique	Maximum 2500 words	40%	Knowledge collation	Scientific synthesis and clarity of expression	Week 10

The details of the assessment tasks will be provided at the start of the field course. Please submit your assignments to the BEES School Office.

Assignments and reports must be submitted on time. No extensions will be permitted (apart from the normal provisions in the University calendar). Completed laboratory exercises and assignments **with cover sheet** must be submitted at the correct time as stated for the assignment. **Penalties for late submission – 10% per day up to 5 days, then mark is 0%**

## 6. Academic honesty and plagiarism

### What is Plagiarism?

Plagiarism is the presentation of the thoughts or work of another as one's own.

\*Examples include:

- direct duplication of the thoughts or work of another, including by copying material, ideas or concepts from a book, article, report or other written document (whether published or unpublished), composition, artwork, design, drawing, circuitry, computer program or software, web site, Internet, other electronic resource, or another person's assignment without appropriate acknowledgement;
- paraphrasing another person's work with very minor changes keeping the meaning, form and/or progression of ideas of the original;
- piecing together sections of the work of others into a new whole;
- presenting an assessment item as independent work when it has been produced in whole or part in collusion with other people, for example, another student or a tutor; and
- claiming credit for a proportion a work contributed to a group assessment item that is greater than that actually contributed.†

For the purposes of this policy, submitting an assessment item that has already been submitted for academic credit elsewhere may be considered plagiarism.

Knowingly permitting your work to be copied by another student may also be considered to be plagiarism.

Note that an assessment item produced in oral, not written, form, or involving live presentation, may similarly contain plagiarised material.

The inclusion of the thoughts or work of another with attribution appropriate to the academic discipline does *not* amount to plagiarism.

The Learning Centre website is main repository for resources for staff and students on plagiarism and academic honesty. These resources can be located via:

[www.lc.unsw.edu.au/plagiarism](http://www.lc.unsw.edu.au/plagiarism)

The Learning Centre also provides substantial educational written materials, workshops, and tutorials to aid students, for example, in:

- correct referencing practices;
- paraphrasing, summarising, essay writing, and time management;
- appropriate use of, and attribution for, a range of materials including text, images, formulae and concepts.

Individual assistance is available on request from The Learning Centre.

Students are also reminded that careful time management is an important part of study and one of the identified causes of plagiarism is poor time management. Students should allow sufficient time for research, drafting, and the proper referencing of sources in preparing all assessment items.

\* Based on that proposed to the University of Newcastle by the St James Ethics Centre. Used with kind permission from the University of Newcastle

† Adapted with kind permission from the University of Melbourne

## 7. Course schedule

GEOS3733 / 6733 will run in O-week, from Monday 20<sup>th</sup> to Friday 24<sup>th</sup> July at Wombeyan Karst Conservation Reserve. For information see:

<http://www.nationalparks.nsw.gov.au/Wombeyan-Karst-Conservation-Reserve>

**The cost for the fieldtrip is \$300 per person.** This includes all travel, food and accommodation costs. **You must pay for the trip beforehand. We will post instructions on how to do this at the Moodle site** when it is up and running.

Accommodation is on site, in dormitory rooms (up to 8 people in each room).

<http://www.nationalparks.nsw.gov.au/wombeyan-karst-conservation-reserve/wombeyan-caves-dormitories/accommodation>

We will cater for ourselves (all food will be provided, with group cooking each evening). You will need to provide a sleeping bag / linen, and your own plate, bowl and cutlery. We will cater for dietary requirements.

Wombeyan Karst Reserve is relatively remote – the nearest town is Goulburn (78 km, 1 hr 45 mins). There is one shop on site with very limited supplies (ice cream, coffee, sweets).

You must fill out:

**HS009 Fieldwork Authorisation & Medical Questionnaire for Students** which can be accessed here:

<http://www.bees.unsw.edu.au/fieldwork-approval>

Please forward the completed form to [a.baker@unsw.edu.au](mailto:a.baker@unsw.edu.au)

### Monday:

- 9 am Coach transfer from UNSW to Wombeyan.
- 12.00-1.00pm lunch
- 1:00-5:00pm Introduction to the course and tour of the Wombeyan Karst Reserve.

### Tuesday - Thursday:

- 9:00 am to 6:00 pm Lectures, fieldwork and data analysis

**Friday:**

- 9:00 to 11:00 Group presentations
- 11:00 to 12:00 Fieldtrip summary
- 12:00 Coach departs Wombeyan Karst Reserve for UNSW

## 8. Expected Resources for students

There is no single textbook for this course. However, the following books are relevant to specific techniques:

Coble, P.G. et al. (eds) 2014. Aquatic Organic Matter Fluorescence. CUP. 978-11-398-97907.  
(Due Apr 2014)

Flanagan, L.B. et al. 2005. Stable isotopes and biosphere - atmosphere interactions: processes and biological controls. Elsevier Academic ISBN 978-012-0884-476

Kirkham, M.B., 2014. Principles of Soil and Plant Water Relations. Elsevier Academic Press. 2nd Ed ISBN 978-012-4200-227 (Due June 2014)

Price, M. 2013. Introducing Groundwater. Springer. 2nd Edn. ISBN 978-041-2485-008

West, J.B. et al (eds) 2010. Isoscapes. Springer 978-90-481-3354-3.

All lectures will be uploaded onto Moodle and handouts will be made available where appropriate during the field class. Lecture notes and handouts will provide details of additional reading material, available from the UNSW Library website:

<http://info.library.unsw.edu.au/web/services/services.html>

Some potentially useful internet resources that relate to the equipment available to the course are:

## 9. Course evaluation and development

This is the third time that this course has been run, and we will collect student feedback to continue to evaluate and develop the course. Based on previous feedback, we have extended the course by one day to provide more time to undertake the fieldwork. The course has also moved from week 1 to O-week on the request of other schools, to prevent timetable clashes.

## 10 . Other information

<b>Expectations of Students</b>	Attendance on the fieldclass is compulsory.		
<b>Assignment Submissions</b>	Assignments and reports must be submitted on time. No extensions will be permitted (apart from the normal provisions in the University calendar). Completed laboratory exercises and assignments <b>with cover sheet</b> must be submitted at the correct time as stated for the assignment.		
<b>PENALTIES</b>	<b>Penalties for late submission – 10% per day up to 5 days, then mark is 0%</b>		
<b>Assessment Procedures</b>	Normal UNSW rules apply to illness, misadventure or other situations which affect attendance at class or submission of assessment tasks.		
<b>Equity and Diversity</b>	Students who have a disability that requires some adjustment in their teaching or learning environment are encouraged to discuss study needs with the course Coordinator prior to the course commencing, or with the Equity Officer (Disability) in the Equity and Diversity Unit (9385 4734 or <a href="http://www.equity.unsw.edu.au/disabil.html">www.equity.unsw.edu.au/disabil.html</a> ). Issues to be discussed may include access to materials, signers or note-takers, the provision of services and additional exam and assessment arrangements. Early notification is essential to enable any necessary adjustments to be made. Information on designing courses and course outlines that take into account the needs of students with disabilities can be found at: <a href="http://www.secretariat.unsw.edu.au/acboardcom/minutes/coe/disabilityguidelines.pdf">www.secretariat.unsw.edu.au/acboardcom/minutes/coe/disabilityguidelines.pdf</a>
