# GEOS3721

## Highlights and Student Course Evaluation Comments (2007 - 2015)

*"The field trip was very useful for hands on learning experience as were the lab classes"*

*"The overall structure of the course allowed us to work through the knowledge and information in a systematic way."*

*"Weekly Festivals really help reinforce lecture and laboratory content."*

*"Lecturer has a very personable teaching style making lectures and laboratory classes interesting and well explained."*

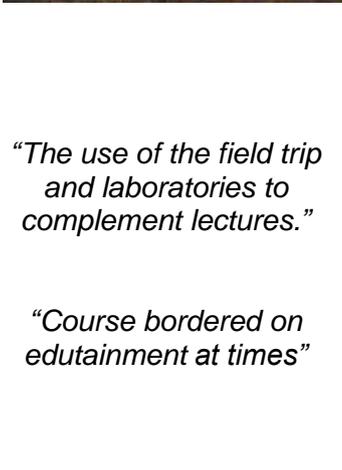

*The Interactivity in the course was amazing as we were able to undertake individual and self-guided learning. this course was amazing*

*"The practical classes and the field trip were very useful and related well to lecture material."*

*"The overall teaching of this subject was very good. The lecturer was very approachable."*

*"The use of the field trip and laboratories to complement lectures."*

*"Course bordered on edutainment at times"*

*"The practical application of the information made learning easier and more interesting."*

*"Love teaching style, very chill and borders on Edutainment!"*

## Course Outline

### 1. Information about the Course

NB: Some of this information is available on the [UNSW Virtual Handbook](#)<sup>1</sup>

Year of Delivery	<b>2019</b>			
<u>Course Code</u>	GEOS3721			
Course Name	Australian Soil Use and Management			
Academic Unit	School of Biological Earth and Environmental Sciences			
Level of Course	3			
Units of Credit	6UOC			
Session(s) Offered	<b>Trimester 3</b>			
Assumed Knowledge, Prerequisites or Co-requisites	Either GEOS1211 or GEOS2721/GEOS2101 or GEOS1701			
Hours per Week	6			
Field Trip	<b>Compulsory 4-day Field Trip during O-Week and before session starts (12-15 September, 2019)</b>			
Number of Weeks	<b>10 Weeks</b>			
Commencement Date	<b>Thursday 12 September</b>			
<b>Summary of Course Structure (for details see 'Course Schedule')</b>				
Component	HPW	Day	Time	Location
<i>e.g. Lectures</i>	2-3			
Lecture 1		Friday	9-10 AM	Biosciences Lab 2
Lecture 2		Friday	1 - 2 PM	Biosciences Lab 5
Lecture 3 (as required)		Friday	3 - 4 PM	Biosciences Lab 5
Laboratory	2-3	Friday	1 - 4 PM	Biosciences Lab 5
Festival of Knowledge	2 hours			<b>TBA</b>
Field Trip	28 hours	12-15 September 2019	O-week	Gunnedah Edgeroi Narrabri Wee Waa
Online				
<b>TOTAL</b>	<b>5</b>			
Special Details	• There is limited disabled access at <b>Narrabri and surrounds</b>

Additional Teaching Staff	Technical & Laboratory Staff	Ms Mira Vanderlay	Rm G23A <a href="mailto:m.vanderlay@unsw.edu.au">m.vanderlay@unsw.edu.au</a> 9385 8030	TBA

<sup>1</sup> UNSW Virtual Handbook: <http://www.handbook.unsw.edu.au/2008/index.html>

### 3. Course Details

<p><u>Course Description</u><sup>2</sup> (Handbook Entry)</p>	<p>The soil continuum is the outermost layer of the earth, extending from the surface through various horizons to parent material of consolidated substrate or unconsolidated material. It acts as the interface between the atmosphere, biosphere, lithosphere and hydrosphere and although we rely on it to provide most of our food and fibre and build our houses upon it we give it little thought? This course aims to introduce and consolidate students knowledge in the discipline area of the science and management of soil in the Australian context. Classes will be reinforced by a field trip to northern and northwest New South Wales.</p>
<p><u>Course Aims</u><sup>3</sup></p>	<p>In the first part of the course we focus on Pedology (from Russian: <i>pedologiya</i>, from the Greek <i>pedon</i> = soil, earth). We will study soil formation and the branch of <a href="#">soil science</a> dealing with soil genesis (i.e. factors and processes), morphology, classification and distribution. Students will gain hands on experience in describing various soil profiles using qualitative morphological properties (e.g. colour, texture, structure, reaction, consistency and drainage). This will help in understanding the various soil forming factors and processes that have led to the development of various soil types in the Australian landscape and be invaluable diagnostic tools which students can use in practice to ascertain limitations and determine appropriate management strategies. In the second part we will study soil physics, chemistry and mineralogy. Here our focus will be on the complex mixture of rock fragments and minerals, soil structure and the movement of water and air through soil pores. Theoretical lectures and practical classes in the area of soil physics will focus on soil as a three phase system, a reservoir of water, infiltration and saturated hydraulic conductivity. Complimentary lectures and classes in the area of soil chemistry will be in the area of cation exchange capacity, nutrient cycling, acidification and soil salinisation. In all areas practical aspects of managing soil degradation will be explored in the Australian context. In the last part of the course students will be introduced to new methods of remotely sensed data and GIS application for improved soil use and management. Specifically students will study applications in electromagnetic induction, resistivity instrumentation and gamma ray spectrometry. Finally, numerical classification and modeling of these data sets are discussed and used to develop soil management classes and maps of soil attribute features and land suitability assessment, respectively.</p>
<p><u>Student Learning Outcomes</u><sup>4</sup></p>	<p>Fundamental principles → Data collection → Data interpretation → Environmental management  <i>Acquisition of knowledge</i> → <i>Application to theory</i> → <i>Application to practice</i> → <i>Communication to others</i></p> <p>Laboratory and fieldwork will provide practical skills in a range of geological, geomorphological and soil laboratory methods. The course also emphasises the development of:</p> <ul style="list-style-type: none"> <li>• Report and essay writing</li> <li>• Project planning and management, including data collection and interpretation</li> <li>• Group working, co-ordination and delegation</li> </ul> <p>The various assignments will test the knowledge and understanding of geomorphology, sedimentology and pedology in the surficial environment, with a focus on landforms and the processes that shape them. Practical skills in conducting field surveys, laboratory tests and data analysis will also be developed and tested in the course, as well as writing skills at communicating the results. The course will emulate the type of professional activities that students might be expected to undertake on graduation.</p>

### 3. Course Details (cont.)

Graduate Attributes Developed in this Course <sup>5</sup>		
<a href="#">Science Graduate Attributes</a> <sup>5</sup> (maybe replaced by UNSW, School or professional attributes)	Select the level of FOCUS 0 = NO FOCUS 1 = MINIMAL 2 = MINOR 3 = MAJOR	Activities / Assessment
Research, inquiry and analytical thinking abilities	3	Literature reviews and critique of published Australian and International journal articles Design, conduct and interpretation of results of field and laboratory work
Capability and motivation for intellectual development		
Ethical, social and professional understanding	3	Role of geomorphology, geology and pedology in describing and understanding natural resources and application of knowledge to environmental sustainability and natural resource management
Communication	3	Essay, weekly quizzes and reports on laboratory work and field trip
Teamwork, collaborative and management skills	2	Laboratory work and field trip compiling pedological and geophysical survey data
Information literacy	2	Use of information resources for essay and seminar presentation

Syllabus Outline	
Major Topics	The course covers the major syllabus topics of Pedology (Soil forming factors and processes), soil physics (soil/water/air interactions), soil chemistry (acidity/alkalinity and salinity) as well as introductory aspects to the emerging areas of digital soil mapping and proximal soil sensing (electromagnetic induction and gamma-ray spectrometry).
Relationship to Other Courses within the Program	The course is an option within the earth science programs and plans, with particular relevance to students undertaking environmental science or resource geology. The course is supported by level 1, 2 and 3 courses in GEOS The course is complementary with by the following first year courses: GEOS1211 Environmental Earth Science GEOS1701 Environmental Systems and Processes The course is complementary with by the following second year courses: GEOS2291 Ground and Surface Water GEOS2721 Australian Surface Environments and Landforms GEOS2181 Earth Materials GEOS2711 Australian Climate and Vegetation The course is complementary with by the following third year courses: GEOS3281 Environment and Contaminant Geochemistry GEOS3711 Biogeography and Human Impact in Australia GEOS3761 Environmental Change GEOS3911 Environmental Impact Assessment

#### 4. Rationale and Strategies Underpinning the Course

<p><b>Teaching Strategies</b></p>	<p>The structure of the course is built around the lectures and weekly laboratory classes as well as associated readings included in the laboratory manual. The concepts introduced and discussed in the lectures are reinforced through the self-guided and self-paced wet and computer laboratories and the field tutorial.</p> <p>There will be a compulsory field trip to northern and northwest New South Wales. The trip will be run during the mid-session break (TBA). Students will incur costs of approximately \$200.00. Further cost details will be announced. It is a BEES School Policy that field trip payment is received in advance. Payment is due by TBA. Preferred payment is online. Refund cut-off date is TBA and will only be considered in the event of a serious documented misadventure. The theme of the field trip will be to investigate the soil forming factors and soil forming processes of various soil types and the soil use and management issues related to various soil types in northern New South Wales. On the field trip, students will partake in a variety of data collection tasks and describing soil profiles <i>in situ</i>.</p>	
<p><b>Rationale for learning and teaching in this course<sup>6</sup>,</b></p>	<p><b>Guidelines on teaching:</b></p>	<p><b>Application to course:</b></p>
	<p>1. A climate of enquiry should be developed where students feel challenged</p>	<p>1. <i>Emphasis of the complexity of geochemical systems – what is known and what is not known</i></p>
	<p>2. Activities should be interesting and challenging</p>	<p>2. <i>Field and laboratory work involves students in planning and experiences</i></p>
	<p>3. Material must be perceived as relevant to future study or professional practice</p>	<p>3. <i>Laboratory and field exercises are based on typical projects that young professionals would undertake.</i></p>
	<p>4. There must be dialogue/interaction between lecturers and students</p>	<p>4. <i>Some of the teaching (especially laboratories) will follow a classical Greek dialectic approach</i></p>
	<p>5. There should be multiple teaching methods</p>	<p>5. <i>Lectures, laboratories, fieldwork and readings</i></p>
	<p>6. Goals, outcomes and requirements of the course must be clearly articulated</p>	<p>6. <i>The relevance of each topic and the purpose and outcomes of the laboratory work will be discussed</i></p>
	<p>7. Students are to be encouraged to take responsibility for own learning</p>	<p>7. <i>Field trips require students to undertake largely undirected note taking; students to interpret nature of data collected during laboratory classes and field trip</i></p>
	<p>8. Broad graduate attributes must be developed</p>	<p>8. <i>See above</i></p>
	<p>9. Co-operative work with peers assists learning</p>	<p>9. <i>Much of the work is group-based, though reporting is individual</i></p>
	<p>10. There must be informative and timely feedback to students on progress</p>	<p>10. <i>Weekly quizzes will be used to assess student learning and build learning outcome</i></p>

## 8. Required Equipment, Training and Enabling Skills

<b>Equipment Required</b>	<p>A data stick is required to download powerpoint presentations used as laboratory templates for electronic tutorials held in Biosciences computing laboratory Room L2 or L5 (i.e. Weeks 0+1, 2, 3 and 5).</p> <p>A laboratory coat is necessary in laboratory classes held in Biosciences Room L2 or L5 (i.e. Weeks 4, 8, 9 and 10+11). Laboratory manual is required in all laboratory classes.</p> <p>Students are required to wear protective footwear (i.e. closed toe shoes) in all laboratory classes held in the Biosciences wet laboratory Room L2 or L5 (i.e. Weeks 7, 8 and 9) and during the field tutorial held in Narrabri and surrounds. This includes work boots, casual and sports shoes but excludes sandals and thongs.</p>
<b>Enabling Skills Training Required to Complete this Course</b>	

## 9. Course Evaluation and Development

Student feedback is gathered periodically by various means. Such feedback is considered carefully with a view to acting on it constructively wherever possible. This course outline conveys how feedback has helped to shape and develop this course.

Mechanisms of Review	Last Review Date	Comments or Changes Resulting from Reviews																																																																																																																																																																																																																			
Major Course Review		<p>Student comments:</p> <p><i>“Change the date of the field trip! Having the field trip so late in the semester does not promote a good learning atmosphere!!!”</i></p> <p><i>“I realise academic staff can be pressed for time, but I think a 4-day field trip plus a field trip report (due within just 2 weeks) as late as week 12/13 is far from ideal. Most students are busiest at this end of semester, and will struggle to produce a thorough field report due to other assessments.”</i></p> <p>Given the field trip was seen by most students (see comments below) as a way of reinforcing learning outcomes, but considering the issues of excursion timing and the requirement of a follow up report as a form of assessment, in 2012 the field trip was conducted during mid-session break with field report due one month later.</p>

Other		<p>Student comments:</p> <p><i>“The interaction was very good. We see concrete application of what we learn or how a particular assessment can be made. It is not abstract, but addresses concrete problems related to soil use and management so that we can understand better the value of learning/doing what we do.”</i></p> <p><i>“The diversity of topics studied, which kept it interesting and provided a good base of knowledge for more specialised upper level courses. Also the practical elements; laboratories, field trip. They weren't too difficult but reinforced the material well.”</i></p> <p><i>“The integration of different teaching mediums (ie. computer and soil laboratories). The field trip was also useful in developing the knowledge and skills acquired in lectures and laboratory classes.”</i></p>

# GEOS3721

## Highlights and Student Teacher Evaluation Comments (2006-2015)

*The course covered a wide range of soil science issues current in Australia and dealt well with the related management problems. The lectures were enjoyable and easy to follow.*

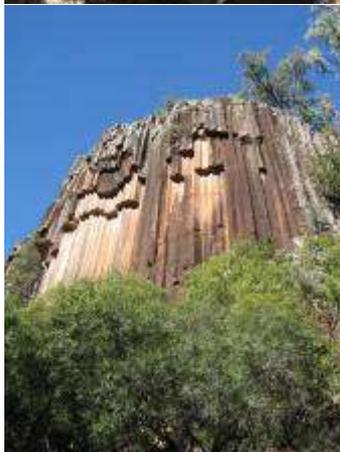

*"This course has definitely been the highlight of my degree so far. The fantastic structure and in-depth exploration of content made the experience interesting and rewarding.."*

*"WHAT A COURSE!  
This was honestly one of my favourite courses."*

*"The field trip was brilliant. It really helped me develop a profound sense of appreciation for soil."*

*"The lectures are well done, and the main points made well known."*

*"The conduct and organisation of the content was excellent and delivered both with professionalism and personality."*

*"The lecturer communicated the course material very effectively, in an engaging and involving manner."*

*"Lectures slides and laboratory book are very polished products."*

*"Prepares good slides, delivers lectures very well. Listens and makes time for undergraduate students."*

*"Excellent consistency across all aspects - lectures, labs and assessment tasks."*

*"Teaching during lectures was excellent, field trip was similarly useful."*

## 10. Administration Matters

Expectations of Students	Attendance at lectures, laboratories and the field tutorial is compulsory. Bioscience laboratories Room 401 and G07 are available for student use whenever the laboratories are not being used for teaching. <a href="http://www.bees.unsw.edu.au/current/studentoffice.html">www.bees.unsw.edu.au/current/studentoffice.html</a> and <a href="http://www.bees.unsw.edu.au/current/ugradguidelines.html">www.bees.unsw.edu.au/current/ugradguidelines.html</a>		
Assessment components	Festivals of Knowledge (12) 48% Field Festival 12% Final Examination 40%		
Assignment Submissions	Assignments and reports must be submitted on time. No extensions will be permitted (apart from the normal provisions in the University calendar). Completed laboratory exercises and assignments with cover sheet must be submitted at the BEES undergraduate office (Bioscience Room G27) before 4 pm on the due date. Penalties for late submission apply.		
<a href="#">Occupational Health and Safety</a> <sup>10</sup>	See Section 11.		
Travel	Students will need to arrange their own food during the field tutorial during Feb 22-25. Accommodation and travel expenses usually amount to \$180, which needs to be paid on-line.		
Assessment Procedures	Normal UNSW rules apply to illness, misadventure or other situations which affect attendance at class or submission of assessment tasks.		
Equity and Diversity	Students who have a disability that requires some adjustment in their teaching or learning environment are encouraged to discuss study needs with the course Convenor prior to the course commencing, or with the Equity Officer (Disability) in the Equity and Diversity Unit (9385 4734 or <a href="http://www.equity.unsw.edu.au/disabil.html">www.equity.unsw.edu.au/disabil.html</a> ). Issues to be discussed may include access to materials, signers or note-takers, the provision of services and additional exam and assessment arrangements. Early notification is essential to enable any necessary adjustments to be made. Information on designing courses and course outlines that take into account the needs of students with disabilities can be found at: <a href="http://www.secretariat.unsw.edu.au/acboardcom/minutes/coe/disabilityguidelines.pdf">www.secretariat.unsw.edu.au/acboardcom/minutes/coe/disabilityguidelines.pdf</a>

## 11. OH&S OBLIGATIONS

The School of BEES recognises its obligations to provide a safe working environment for all persons involved in School-related activities. To achieve this goal with regards to teaching and learning, the School adopts the UNSW Occupational Health and Safety Policy (2001) and the UNSW OH&S Responsibility and Accountability Document (2001). These documents stipulate that everyone attending a UNSW workplace must ensure their actions do not adversely affect the health and safety of others. This outcome is achieved through the establishment of a documented chain of responsibility and accountability for all persons in the workplace, extending from the Head of School through to the students undertaking courses offered.

As part of this chain of responsibility and accountability, the Course Authority is responsible for ensuring all activities associated with this course are safe. The Course Authority has undertaken detailed risk assessments of all course activities and identified all associated potential hazards. These hazards have been minimised and appropriate steps taken to ensure your health and safety. For each activity, clear written instructions are given and appropriate hazard warnings or risk minimisation procedures included for your protection.

It is the student's responsibility to prepare for all practical work. Students should be familiar with the written procedures scheduled for the practical class and identify all personal protection requirements needed to complete the exercise in a safe manner. Students must comply with all safety instructions given by the Course Authority and/or Laboratory / Field Demonstrator, and observe the Safety Information located outside or within teaching rooms. If you are unsure of any safe operating procedures or written instruction regarding safety, you should seek further information from the Course Authority and/or Laboratory / Field Demonstrator before attempting the task. Failure to comply with safety instructions may, in the first instance, be considered as a form of academic misconduct. If the outcome of a student's failure to comply with safety instructions results in personal injury, or endangers the health and safety of others, then the matter may be dealt with by WorkCover as a breach of the NSW OH&S Act (2000).

### Conditions of Entry To Courses

To abide with **Section 10 OCCUPATIONAL HEALTH AND SAFETY ACT** of the **N.S.W. Occupational Health & Safety Act (2000)**:

#### Duties of controllers of work premises, plant or substances

- (1) A person who has control of premises used by people as a place of work must ensure that the premises are safe and without [risks](#) to health.
- (2) A person who has control of any plant or substance used by people at work must ensure that the plant or substance is safe and without [risks](#) to health when properly used.
- (3) The duties of a person under this section:
  - (a) do not apply to premises, plant or substances used only by employees of the person, and
  - (b) do not apply to premises occupied only as a private dwelling or to plant or substances used in any such premises, and
  - (c) extend to the means of access to or exit from a place of work, and
  - (d) apply only if the premises, plant or substances are controlled in the course of a trade, business or other undertaking (whether for profit or not) of the person.
- (4) In this section, a person who has control of premises, plant or substances includes:
  - (a) a person who has only limited control of the premises, plant or substances (in which case any duty under this section applies only to the matters over which the person has control), and
  - (b) a person who has, under any contract or lease, an obligation to maintain or repair the premises, plant or substances (in which case any duty under this section applies only to the matters covered by the contract or lease).

ENTRY TO SCHOOL BUILDINGS, AND ATTENDANCE ON FIELD EXCURSIONS, WILL BE DENIED TO STUDENTS WHO DO NOT ABIDE BY THESE CONDITIONS.

Professor Alistair Poore, Head of School

## 12. UNSW Academic Honesty and Plagiarism

### What is Plagiarism?

Plagiarism is the presentation of the thoughts or work of another as one's own.

\*Examples include:

- direct duplication of the thoughts or work of another, including by copying material, ideas or concepts from a book, article, report or other written document (whether published or unpublished), composition, artwork, design, drawing, circuitry, computer program or software, web site, Internet, other electronic resource, or another person's assignment without appropriate acknowledgement;
- paraphrasing another person's work with very minor changes keeping the meaning, form and/or progression of ideas of the original;
- piecing together sections of the work of others into a new whole;
- presenting an assessment item as independent work when it has been produced in whole or part in collusion with other people, for example, another student or a tutor; and
- claiming credit for a proportion a work contributed to a group assessment item that is greater than that actually contributed.†

For the purposes of this policy, submitting an assessment item that has already been submitted for academic credit elsewhere may be considered plagiarism.

Knowingly permitting your work to be copied by another student may also be considered to be plagiarism.

Note that an assessment item produced in oral, not written, form, or involving live presentation, may similarly contain plagiarised material.

The inclusion of the thoughts or work of another with attribution appropriate to the academic discipline does *not* amount to plagiarism.

The Learning Centre website is main repository for resources for staff and students on plagiarism and academic honesty. These resources can be located via:

[www.lc.unsw.edu.au/plagiarism](http://www.lc.unsw.edu.au/plagiarism)

The Learning Centre also provides substantial educational written materials, workshops, and tutorials to aid students, for example, in:

- correct referencing practices;
- paraphrasing, summarising, essay writing, and time management;
- appropriate use of, and attribution for, a range of materials including text, images, formulae and concepts.

Individual assistance is available on request from The Learning Centre.

Students are also reminded that careful time management is an important part of study and one of the identified causes of plagiarism is poor time management. Students should allow sufficient time for research, drafting, and the proper referencing of sources in preparing all assessment items.
