What is geography?

Geography is the study of Earth’s landscapes, peoples, places and environments. It is, quite simply, about the world in which we live.

Students will study how natural and built environments function and change over time, or how these environments enhance or constrain human activity.

Geography graduates can analyse and synthesise complex environmental, economic, social and political information to provide an integrated understanding of humans, environments and the dynamic relationships between them.

How can I study geography at UNSW?

Geography can be taken as part of the below Science or Arts degrees:

- 3970 Bachelor of Science
- 3962 Bachelor of Advanced Science (Honours)
- 3965 Bachelor of Environmental Management
- 3947 Bachelor of Science/Bachelor of Arts
- 3955 Bachelor of Environmental Management/Bachelor of Arts

Career Opportunities

Geographers enjoy careers within the private and public sectors involved in natural resources and social planning, environmental and urban management, and environmental and social policy research. Over the years, graduates from the School of BEES have been employed by transport and infrastructure government agencies, National Parks, Australian Bureau of Statistics, Sydney Water and also by environmental consultants.
